INTRODUCTION

I.1 Summary

This document is the user manual for the CMEMS analysis and forecast product **BLKSEA_ANALYSIS_FORECAST_BIO_007_010**. An archive of analysis since 01/01/2017 up to real-time is available on the CMEMS server.

The product is composed by 3D daily and monthly mean concentration of chlorophyll, nitrate, phosphate, dissolved oxygen, phytoplankton carbon biomass, pH, dissolved inorganic carbon, net primary production and by 2D daily and monthly means of vertically integrated bottom oxygen concentration (for the shelf), surface partial pressure of CO2 and surface flux of CO2.

BLKSEA_ANALYSIS_FORECAST_BIO_007_010 product is organized in 11 datasets:

- 5 contain the 3D monthly mean fields for all the variables
 - o bs-ulg-bio-an-fc-m
 - o bs-ulg-car-an-fc-m
 - o bs-ulg-co2-an-fc-m
 - o bs-ulg-nut-an-fc-m
 - o bs-ulg-pft-an-fc-m
- 5 contain the 3D daily mean fields for all the variables
 - o bs-ulg-bio-an-fc-d
 - o bs-ulg-car-an-fc-d
 - o bs-ulg-co2-an-fc-d
 - o bs-ulg-nut-an-fc-d
 - bs-ulg-pft-an-fc-d
- 1 contains the static fields for the system: coordinates, mask and bathymetry:

II.3 Product System Description

The biogeochemical hindcasts and forecasts for the Black Sea are produced by the MAST / ULg Production Unit by means of the NEMO 3.6 3D circulation model online coupled with the BAMHBI biogeochemical model. The workflow runs at the Cenaero (Belgium) Tier-1 supercomputing centre called Zenobe. Analysis is produced once a week, forecasts are produced daily.

Issue: 1.0

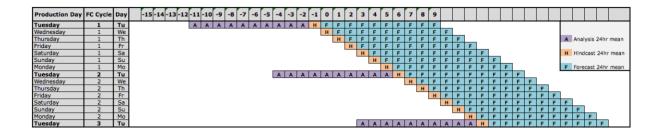

II.4 Processing information

BLKSEA_ANALYSIS_FORECAST_BIO_007_010 analysis and forecast products are updated daily within 17 UTC. The production is composed by: 1 day of hindcast (also referred to as simulation, S) and 10 days of forecast (F). An example of aggregated product is shown in the Figure below.

Ref: CMEMS-BS-PUM-007-010 Date: 19/04/2019

Issue: 1.0

II.4.1 Update Time

Daily datasets are updated daily at 17:00 UTC.

The monthly dataset is updated monthly on the 20th (addition of the monthly mean of the previous month).

II.4.2 Time coverage

An archive of analysis since 01/01/2017 up to real-time is available.

II.4.3 Time averaging

For the monthly dataset, the fields are monthly means over the calendar month (first to last day of the month). For the daily dataset, the fields are daily means over a day (midnight to midnight, centred at noon).

IV FILES NOMENCLATURE AND FORMAT

IV.1 Nomenclature of files when downloaded through the Subsetter Service

BLKSEA_ANALYSIS_FORECAST_BIO_007_010 files nomenclature when downloaded through the CMEMS Web Portal Subsetter is based on product dataset name and a numerical reference related to the request date on the portal.

The scheme is: datasetname_nnnnnnnnnnnn.nc

where:

- **datasetname**: as described previously
- **nnnnnnnnnnn:** 13 digit integer corresponding to the current time (download time) in milliseconds since January 1, 1970 midnight UTC.
- .nc: standard NetCDF filename extension.

Example: bs-ulg-bio-an-fc-d_1303461772348.nc

IV.2 Nomenclature of files when downloaded through the DGF and CMEMS FTP Services

BLKSEA_ANALYSIS_FORECAST_BIO_007_010 files nomenclature when downloaded through the CMEMS Web Portal DGF or FTP service is based as follows:

{valid date}_{freq flag}-{producer}--{parameter}-{config}-{region}-{bul date}_{product type}-sv{file version}.nc

where

- valid date YYYYMMDD is the validity day of the data in the file
- freq flag is the frequency of data values in the file (h = hourly, hts = hourly time series, d = daily, m=monthly)
- producer is a short version of the CMEMS production unit
- **config** identifies the producing system and configuration
- region is a maximum six letter code for the region
- **parameter** is a four letter code for the parameter or parameter set from Standard BODC.
- bul date bYYYYMMDD is the bulletin date the product was produced
- **product type** is a two letter code for the product type, for example fc for forecast, an for analysis and sm for hindcast.
- **file version** is xx.yy where xx is the CMEMS version (07, 08 or 09) and yy is an incremental version number

Table 1 shows the nomenclature for the BLKSEA ANALYSIS FORECAST BIO 007 010 products.

IV.3 File Format: format name

The products are stored using the NetCDF format.

NetCDF (network Common Data Form) is an interface for array-oriented data access and a library that provides an implementation of the interface. The NetCDF library also defines a machine-independent format for representing scientific data. Together, the interface, library, and format support the creation, access, and sharing of scientific data. The NetCDF software was developed at the Unidata Program Center in Boulder, Colorado. The NetCDF libraries define a machine-independent format for representing scientific data.

Please see Unidata NetCDF pages for more information, and to retrieve NetCDF software package.

NetCDF data is:

- * Self-Describing. A netCDF file includes information about the data it contains.
- * Architecture-independent. A NetCDF file is represented in a form that can be accessed by computers with different ways of storing integers, characters, and floating-point numbers.
- * Direct-access. A small subset of a large dataset may be accessed efficiently, without first reading through all the preceding data.

^{*} Appendable. Data can be appended to a NetCDF dataset along one dimension without copying the dataset or redefining its structure. The structure of a NetCDF dataset can be changed, though this sometimes causes the dataset to be copied.

^{*} Sharable. One writer and multiple readers may simultaneously access the same NetCDF file.
